
CAN'T LOGIN... help!!!

Posted by JWtechnologies - 2008/02/01 02:01

Posts after posts from users with the same problem but yet NO answers!!!

After Installing JAACL onto a Joomla install I am unable to log into the front end! I've tried uninstalling the component, replacing the gacl.class.php and index.php to no avail.

This component should come with a health warning :angry:

Can anyone help me uninstall this and get my site back on track?
