
Install the generated key

Posted by enrico - 2008/02/01 18:54

Hi,

I've generated the JACLPlus Pro key, but I can't find any way to install it. Should I install something or is there an online check? If it is an online check, how can I use it in an intranet without any access to internet?

Thanks
Enrico

I've the same problem, the component is installed but I only see encrypted code...

In the JACLPlus admin toolbar exist some buttons, one called "unblock" and other "block" but any of these buttons working.

I've the same problem. When I access "Configuration" or any other option I've got the following message "Invalid JACLPLUS Pro Key".

I'm trying to config this for INTRANET use.:(
