## Testing JACLPlus

Posted by ITByTheSea - 2008/03/13 02:54

---

I am trying to test JACLPlus to see if it does what I need.

So I start by installing joomla 1.0.13 stable on WAMPS because it is the latest version I can try for free, and I am just testing.

I install the JACLPlus component. It says success to the install, and everything is OK. Next thing I know I have lost access to all components. I log off with the idea that, maybe, I have to log back on. No way to log back on, the password is not recognized any more.

I try to get to the front page, and here is the error message:

"mossession : : store failed

DB function failed with error number 1054

Unknown column 'jacplus' in 'field list' SQL=INSERT INTO oldjo\_session ( `session\_id`, `time`, `username`, `gid`, `jacplus`, `guest` ) VALUES ( '482c173cfea034f3380ed7e730876ef7','1205350400','0','0','1' )"

Can anyone help? I would really like to be able to use this component, but...

I have the same issue. How did you fix it?

My version of Joomla was not the one I thought it was LOL.

I thought the 1.0.13 was installed, and it was the 1.0.15
