
JACL groups and DocMan?

Posted by Jmx - 2008/03/17 23:47

Hi,

I'm using JACL Plus and categories/pages works perfekt with it with the new extra user groups made in JACL. But i can't seem to get the new JACL user groups to work in DocMan 1.4 RC2... i've made a new category in DocMan with access set to the new JACL group... and have a few files in it... but that category never turns up when logged in with the new JACL group.

Has anyone got DocMan to work with JACL groups?

I highly appreciate all help i can get :blush:

Up
for me too!

I have not quite the same problem... but I cant get the access level to show up when adding a new document to that category.

I have installed the patch.. but still have a problem..

I ahve been having problems with access as well using JACL and I have a higher level membership than registered called promembers. my promembers have all access that a registered user would have but they can only see files in the promember docman catagory not in the registered catagory.

I have been having the same issue. The access level that I just created is not visible in the list of categories when submitting a file. However older access groups can be assigned to new categories and then they are visible. It seems that I have reached a limit or there is a bug. I only have 30 users and access groups and have changed admin.jaclplus.php and config.jaclplus.php from a maximum of 99 to 999 to no effect.

Any clue what's going on with this?
