
Upgraded Joomla 1.0.13 to 1.015

Posted by nfabbo - 2008/03/19 01:29

Good Day,

I love this component its a life saver over and over again.

I upgraded a joomla installation (1.013) to 1.015 without realizing that I have JCAL installed. (duh!) And Now when I go the the back end admin and select any of the JCAL component menus I get a message that says JCAP Plus Install Unsuccessful.

Just wondering if it's safe to reinstall with this version of joomla and the current version of JCAL or should I roll my installation back and wait for a patch?

Cheers,
Neil

I have the same problem - I get a message that says JCAP Plus Install Unsuccessful in the URL, and nothing happens when I select any of the component menu. Upgrade from 1.0.13 to 1.0.15, installed the component patch first, then the package. Any Ideas?
