
I can't Login!!! Please!! HELP!!!!!!

Posted by meydess - 2008/05/05 12:55

Hi i have installed jcl plus, community builder, and some special login module for community builder. after installed jcl plus i can't login, i create some new account, but i can login.

, I can't login in my admin cpanel

please i need help,can send 10 euros via paypal for the user that help me.

sorry for my english

i see this step, is for the login problem

6) Okay, you have problem with your installation or uninstallation, let's manually restore some of your Joomla!/Mambo files. Please manually replace the following files with your backup files or original files from Joomla!/Mambo installation package. IMPORTANT: Please make sure the files have been replaced successfully.

Files to be manually replaced back:

includes/authenticator.php (Mambo 4.6.x only)
includes/cmtclasses.php (Mambo 4.6.x only)
includes/core.classes.php (Mambo 4.6.x only)
includes/gacl.class.php
includes/gacl_api.class.php
includes/joomla.php (Joomla! only)
includes/mambo.php (Mambo 4.5.x only)
components/com_content/content.class.php (Mambo 4.6.x only)
components/com_content/content.html.php
components/com_content/content.php

7) Play around with your Joomla!/Mambo frontend and backend pages to see any error occur. If you still found error, please continue to the next step or else please go to backend to uninstall the component if you haven't done it and you are DONE

but i can replaze in cuteftp

STATUS:> Socket connected. Waiting for welcome message...

ERROR:> Can't read from control socket. Socket error = #10054.

please i need help!
