
Adding users through backend

Posted by kumbhi - 2008/06/20 21:51

Hi,

We need to add users to the joomla backend through an external application. Without JAACL, this works by adding records to the jos_users, jos_core_acl_aro, jos_core_acl_groups_aro_map tables. With JAACL, this does not work. I presume, I need to make some more table entries. Can anyone help me with what other tables/entries that need to be made to make this work?

Thanks

CS
