
Fatal error: Cannot redeclare checkinputarray()

Posted by lutvia - 2008/07/12 14:49

can I have someone helping me on this matter?

When I try to login into backend and after entering user ID and password the message below appears:

Fatal error: Cannot redeclare checkinputarray() (previously declared in /home/justdcom/public_html/globals.php:28) in /home/justdcom/public_html/globals.php on line 44

```
function checkInputArray( &$array, $globalise=false ) {
static $banned = array( '_files', '_env', '_get', '_post', '_cookie', '_server', '_session', 'globals' );

foreach ($array as $key => $value) {
$intval = intval( $key );
// PHP GLOBALS injection bug
$failed = in_array( strtolower( $key ), $banned );
// PHP Zend_Hash_Del_Key_Or_Index bug
$failed |= is_numeric( $key );
if ($failed) {
die( 'Illegal variable ' . implode( ' or ', $banned ) . ' passed to script.' );
}
if ($globalise) {
$GLOBALS = $value;
}
}
}
```
