
admin function lost with Community Builder 1.2 RC2

Posted by jasonpel - 2008/07/13 09:11

I have noticed that super admin functions are lost (menu items are missing) when JACL 1.0.15a is installed with Community Builder 1.2 RC2. This happens whenever any of the admin Community Builder pages are opened in the admin section. As soon as you open any other admin pages, all of the missing items return to the menu.

Installed: Firefox 3.0, Joomla 1.0.15, CB 1.2RC2, and JACL 1.0.15a

Just a heads up...

Just to say that I have the exact same problem.
And we can't add/edit members with the CB User Manager. When I try to save, gets me a popup error message "Not Authorized".

Can someone help us fix this?

Thanks

This is a big big problem for me, is there any solution yet?

I'm using a fresh install of joomla 1.5.6 and Cb 1.2 and when I install JACLPlus Pro 1.5.6, I cannot access any of my community builder pages. The joomla error message says "you are not authorized to view this resource". Seems similar to what you guys are experiencing.

I need to get into my community builder component without having to uninstall/reinstall jacplus. Is there a solution or will there be a patch coming out soon? Help!

I was looking at installing JACLPlus pro onto my site which is running Joomla 1.5.7 and CB 1.2 RC3.
I was just looking through the forum before I installed to see if there were any problems related to this kind of set up and found this thread. So it seems like a pretty large concern, has this been solved?
Does it basically mean if I install JACL I will loose access to my cb users?

I have this same problem.

CB : 1.2 RC 3
Joomla! 1.0.15 Stable

Any solution? Thanks.
