---

I updated Joomla today to 1.5.6 and my JACPlus stopped working. Luckily I backed up my site earlier today, so I hope if overwrite the files with my backup it will continue to work the way it did before cause if not im screwed

Byostech need to get on and release a Joomla 1.5.6 version of JaclPlus right now!, especially as 1.5.6 is a security release to fix a major issue.

However, for those of you worried about the security risk who don't want to have to \*keep\* updating until ByosTech get round to releasing a 1.5.6 patch, here's the (one) code change you need to make to versions of Joomla prior to 1.5.6.
