
Fireboard 1.04 levels not working properly

Posted by davidjp - 2008/08/15 02:12

Joomla/Jacl 1.5.5 fireboard 1.04 (jacl patched)

User levels:

Registered

Gold

Platinum

When user platinumm signs in, they cant see gold protected forums.

The fireboard session is not properly assigning gold content though it should. (they can see everybody, registered and platinum - not gold)

Looks like an updated patch is needed!

David

Guys, this is a big issue!

I applied the patch and the gold forum isnt showing up.

Being able to have a multi-level forum is a big part of the JAACL plugin and why I turn people onto your plugin.

Please patch this up!!!

Thanks,

David

Fireboard is one of the most popular joomla components, and I would really like to see a patch that works with JAACL Plus and Fireboard 1.04 - have the issues above been resolved in the most recent release?
