## A few questions about jAcl Plus Pro for Joomla 1.5

Posted by miguelpinheiro - 2008/08/22 20:30

---

Hi there,

I have some issues regarding using jACL PLus for Joomla 1.5:

- \* Can I use the same ONE license of JaclPlus Pro for Joomla 1.5 to develop in my local machine (localhost) and in the production environment?
- \* Does JaclPlus uses exclusively Zend Encoder? Ioncube is not supported?
- \* What are the consequences of deactivating Zend Optimizer in my local machine (for debugging purposes using xDebug) having a Joomla Site using jAcl? Do I will be able to run the local Joomla site with Zend Optimizer switched off?
- \* Can I try jAcl for a limited amount of time, before applying to chartered membership?

Thanks for the answers.

Regards.

I know you are hoping for a reply from the creators of this code, but that could be awhile..... so

You can test at localhost without consuming a license.

Zend is it, I had to reconfigure a 64 leopard install to use this extension. (Zend is 32bit only for mac).

Since the code is "optimized", it's encoded. You MUST have zen installed to use at all.

If you want a trial, use the version for Joomla! 1.0.15, as there is no trial for the 1.5.x versions.

Good luck !
