
Problem with VirtueMart 1.0.15

Posted by misterpatrick - 2008/09/09 05:10

Hello all,

I am having a strange problem and need to fix it ASAP. Seems like it may be JACL related. I have no idea what might be causing this. I am running Joomla 1.0.15 with VirtueMart 1.0.15. When I go into Users with the VM component or even the default Users under Joomla, I see my admin in the Username field. I am not able to change anything as I get a "Password doesn't match" error. I need to change permission levels and can't. I am using JACLplus to control permissions.

I have run the JACLplus patch for VM 1.0.14. I wonder if it's a SQL error or something? Here's what I have running:

Joomla 1.0.15
VirtueMart 1.0.15
JACLplus 1.0.15a
DocMan 1.4.0rc3

I have a WIP server running with an identical setup and it's working fine so I think something is broken somewhere, possibly the SQL.

Thanks!

=====

Also, just FYI, I took a look at the SQL database and all the usernames are there in field G if I export to an Excel file from MySQL.
