## extended-menu-module-1.0.5

Hi Byros,

A chartered member here, I notice that you have support already for exmenu 1.0.3 but I was wondering whether you could provide support for extended-menu-module-1.0.5 as well.

We would be willing to pay for these developments, the only problem is that our site needs to go live by the 3rd October 2008 and everything was going well until I found out that JACL Plus doesn't work well with exmenu 1.0.5.

As I say we will be willing to pay for this development work, if this is possible please get in contact.

Is a custom development for extended menu 1.0.5 possible? Following the 'Enhance Access Control' notes I've been able to lock down some custom components but the links still appear in the menu system.

It would be great if JACL could be extended to extMenu 1.0.5 with the ability to screen away certain menu links.

Willing to pay!!!!
