
JACLPlus AND DOCMan 1.3 RC 2

Posted by admin - 2005/10/25 04:52

Only one file of DOCMan 1.3 RC 2 need to be patch before it can be used with JACLPlus. Change on line 117 in DOCMAN_tree.class.php.

From : \$sql .= "\nWHERE section='com_docman' AND published='1' AND access <= '\$my->gid'";

To:// <jaclplus> \$sql .= "\nWHERE section='com_docman' AND published='1' AND access <= '\$my->gid'";

\$sql .= "\nWHERE section='com_docman' AND published='1' AND access IN (\$my->jaclplus)";

Unfortunately, due to DOCMan use its own groups system, JACLPlus Groups will not be able to be used in DOCMan. Anyway, the change will make it work as normal (just like without JACLPlus) and you can create a superb access control to the categories access as well. :)

We have noticed that some files need to be patched in order to allow categories access control works properly with access levels that created by JACLPlus. We will release the patch soon.

Patch doesn't show JACL groups on Admin/Permissions tab

Posted by kawika - 2005/12/02 05:27

Should the JACL groups I create be appearing on the DOCMAN admin -> permissions tab?

I don't see any of them and looking at the code I don't see where DOCMAN_html.class.php was modified (which is where the lists are built, I believe).

Thanks for any help.

Hi kawika,

Due to DOCMan 1.3 RC2 use its own group control system, you will not see the groups created by JACLPlus in its permissions tab. However, our patch have made its categories can be control by access levels. This should be enough for most of the users.

Whilst you say that this fix will suit most people by controlling categories, what happens when you want to control certain documents from within that category.

ie

members only access for one file
guest only access for another file

You can't do this

Hi welby,

Just put the files in different categories and control the categories access based on your need.

i am having issues with doc man ..have posted details in another post here is a excerpt from that..

Please help!

In case of DocMan i have tried installing the patch but its not having any effect .
P.S. i had installed & uninstalled this patch & docman to solve some eerrors i'd been facing using DOC Man)

The users of the groups created by me were unable to see any of the categories they had access to unless they themselves uploaded a file in that category.. Why is that??

Do help!!

Hi coolparth,

Please make sure you have published the categories and the files.

Tha patch has not worked for me either.

I have "published" both the category and the document, but users can only download if I make permission "public" or "everybody"

Ive done all the above, but when I assign the user permissions to the category the user can't see them. If I set user Group1 to Category1 - when user with Group1 permission logs in, they see nothing!

Technical Team. Please address the issues. Will paying for support help getting this resolved faster??? A good product is going to get shamed if the support is non-existent.

thanks

Make Docman 1.4 Beta 2 Work With JACL Plus/Pro With These Files

Posted by elitent - 2007/09/13 14:09

After seeing the vast improvements in Docman 1.4 Beta 2 I needed it to work with JACL Plus/Pro so I went ahead and modified the correct files so Docman will work with JACL, works like a charm.

I have attached the files in a zip with a readme.txt.

Enjoy!

Lee Erickson

My Email address is in the faq if you have any questions..
